First, we need to find the inverse of the A matrix (assuming it exists!) Using the Matrix Calculator we get this: (I left the 1/determinant outside the matrix to make the numbers simpler) Then multiply A⁻¹ by B (we can use the Matrix Calculator again); And we are done! The solution is: x = 5, y = 3, z = - 2. Just like on the Systems of Linear Equations page.

FUNDAMENTALS OF LINEAR ALGEBRA

In mathematics, a matrix (plural matrices) is a rectangular array or table (see irregular matrix) of numbers, symbols, or expressions, arranged in rows and columns. For example, the dimension of the matrix below is 2 × 3 (read "two by three"), because there are two rows and three columns: [− −]. Provided that they have the same size (each matrix has the same number of rows and the same ...

The best way to do this is to browse in the library. Here are two books that some people like: Hoffman and Kunze, Linear Algebra; and Nering, Linear Algebra and Matrix Theory. Both should be on 3-day reserve at the Math and CS library. Another book recommended by Robin is Axler's Linear Algebra Done Right.
