Physics Equilibrium? | Yahoo Answers
If an object is at equilibrium, then the forces are balanced. Balanced is the key word that is used to describe equilibrium situations. Thus, the net force is zero and the acceleration is 0 m/s/s . Objects at equilibrium must have an acceleration of 0 m/s/s . This extends from Newton's first law of motion. But having an acceleration of 0 m/s/s does not mean the object is at rest.

Equation 12.3.6 and Equation 12.3.7 are two equations of the first equilibrium condition (for forces).

Next, we read from the free-body diagram that the net torque along the axis of rotation is $+ r_T T_y - r_{ww} w_y = 0$.

Equation 12.3.8 is the second equilibrium condition (for torques)

A body is in equilibrium if it is in
motion generally, the base of the
object should lie in lowest position so
that the object becomes more stable.
Similarly, the area of base should also

Question Answer | Solutions ...

The well-known American author, Bill Bryson, once said: “ Physics is really nothing more than a search for ultimate simplicity, but so far all we have is a kind of elegant messiness. ” Physics is indeed the most fundamental of the sciences that tries to describe the whole nature with thousands of mathematical formulas.
