The book outlines selected projects conducted under the supervision of the author. Moreover, it discusses significant relations between Interactive Granular Computing (IGrC) and numerous dynamically developing scientific domains worldwide, along with features characteristic of the author's approach to IGrC. The results presented are a continuation and elaboration of various aspects of Wisdom Technology, initiated and developed in cooperation with Professor Andrzej Skowron. Based on the empirical findings from these projects, the author explores the following areas: (a) understanding the causes of the theory and practice gap problem (TPGP) in complex systems engineering (CSE); (b) generalizing computing models of complex adaptive systems (CAS) (in particular, natural computing models) by constructing an interactive granular computing (IGrC) model of networks of interrelated interacting complex granules (c-granules), belonging to a single agent and/or to a group of agents; (c) developing methodologies based on the IGrC model to minimize the negative consequences of the TPGP. The book introduces approaches to the above issues, using the proposed IGrC model. In particular, the IGrC model refers to the key mechanisms used to control the processes related to the implementation of CSE projects. One of the main aims was to develop a mechanism of IGrC control over computations that model a project's implementation processes to maximize the chances of its success, while at the same time minimizing the emerging risks. In this regard, the IGrC control is usually performed by means of properly selected and enforced (among project participants) project principles. These principles constitute examples of c-granules, expressed by complex vague concepts (represented by c-granules too). The c-granules evolve with time (in particular, the meaning of the concepts is also subject of change). This methodology is illustrated using project principles applied by the author during the implementation of the POLTAX, AlgoTradix, Merix, and Excavio projects outlined in the book.

Unlike other pocket guides, this guide is designed specifically to address topics that the author has found to cause problems, issues, and concerns for most Black Belts over the years. As such, its primary purpose is to serve as a useful reference guide for the Black Belt throughout his or her busy day, and particularly in meetings. Practicing population based care is a central focus of the Affordable Care Act and a key component of implementing health reform. Wellness and Prevention, Accountable Care Organizations, Patient Centered Medical Homes, Comparative Effectiveness Research, and Patient Engagement have become common terms in the healthcare lexicon. Aimed at students and practitioners in health care settings, the Second Edition of Population Health: Creating a Culture of Wellness, conveys the key concepts of concepts of population health management and strategies for creating a culture of health and wellness in the context of health care reform. Beginning with a new opening chapter, entitled, Building Cultures of Health and Wellness, the Second Edition takes a comprehensive, forward-looking approach to population health with an emphasis on creating a culture of wellness. The revised text takes into consideration the Affordable Care Act and its substantial impact on how health science is taught, how health care is delivered and how health care services are compensated in the United States. Key Features: - Study and discussion questions are provided at the conclusion of each chapter to highlight key learning objectives and readings. - Case studies highlight real world applications of concepts and strategies, and links to web sites provide additional opportunities for expanding knowledge. - Each chapter can stand alone to highlight key population health issues and provide strategies to address them, allowing educators to choose specific chapters or sections that meet the learning objectives of the course."
